RESOLVER, ONE SPEED TRANSMITTER

TYPE 45RU10N8

1. SCOPE

1.1 This specification establishes the requirements for the procurement of the One Speed Transmitter Resolver, Type 45RU10n8, hereinafter called resolver.

2. APPLICABLE DOCUMENTS

2.1 The following documents of the issue in effect on the date of invitation for bids form a part of this specification to the extent specified herein.

SPECIFICATIONS

Apollo G & N

ND-1002013	Description and Requirments Publication for Procurement of Resolvers, Electrical, AC, General Specification.

DRAWINGS

Apollo G & N

1000030	Resolver, One Speed Transmitter, Specification Control Drawing

(Copies of specifications and drawings required by contractors in connection with specific procurement functions should be obtained from the procuring agency or as directed by the contracting officer.)

3. REQUIREMENTS

3.1 GENERAL. The resolver shall conform to the requirements of specification ND-1002013 with the following exceptions or additions:

a. Accuracy determination shall be made with loads of 1000 ohms ± 10 percent on both secondary windings. The relative accuracy between the two loads shall be ± 0.25 percent.

b. The resolver shall be tested as an RX only, with black excited high, red grounded, and the yellow and blue primary windings commoned and ungrounded.

c. The following paragraphs of Specification ND-1002013 are not applicable.

(1) Phase Shift Variations Due to Voltage.
(2) Angular Error Versus Voltage.
(3) Angular Error Versus Frequency.
(4) Primary Impedance Unbalance.
(5) Temperature Rise.
(6) Friction Torque.
(7) Brush Slip Ring Continuity.

d. Measurement of air gap per side shall be made and shall conform to the value listed in 3.5p.

e. Alignment of electrical zero: With the locating dowel pins aligned as specified on drawing 1000030, rated voltage applied as specified in 3.1b, and secondary loads applied as specifed in 3.1a; the electrical output shall be within ± 2 arc minutes of electrical zero.

3.2 DESIGN AND CONSTRUCTION The resolver shall be of the design, construction and physical dimensions shown on drawing 1000030. The manufacture, material, and mechanical and electrical construction of the resolver shall be in accordance with the requirements of Specification ND-1002013.

3.3 FINISHES AND PROTECTIVE TREATMENT The resolver finishes, protective treatment, and moisture, fungus, and corrosion treatments shall be in accordance with the requirements of drawing 1000030 and Specification ND-1002013.

3.4 QUALIFICATION PERFORMANCE CHARACTERISTICS AND CONDITIONS

3.4.1 General. The qualification testing shall conform to the requirements of Specification ND-1002013 with the following exceptions or additions.

3.4.1.1 Environmental.

3.4.1.1.1 Vibration, Operating. With the resolver tested as specified, the angular deviation shall not exceed 10 arc seconds, peak.

3.4.1.1.2 Shock, Operating With the resolver tested as specified, the angular deviation shall not exceed 10 arc seconds, peak.

3.4.1.1.3 Low Temperature, Operating With the resolver subjected to a temperature of 0°C±2.8°C (32°F±5°F) and tested as specified, the angular deviation shall not exceed 10 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 20 mv, rms.

3.4.1.1.4 High Temperature, Operating With the resolver subjected to a temperature of 93.3°±2.8°C (200F±5°F) and tested as specified, the angular deviation shall not exceed 10 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 20 mv,rms.

3.4.1.1.5 52°C Temperature, Operating With resolver subjected to a temperature of 52°±1°C (125.6°F±1.8°F) and tested as specified, the angular deviation shall not exceed 5 arc seconds, peak and the bridge fundamental null voltage variations shall not exceed 5 mv, rms.

3.4.1.1.6 Thermal Shock The resolver shall be tested as specified with the low temperature as indicated in 3.4.1.1.3.

3.4.1.1.7 Humidity, Operating With the resolver tested as specified, the angular deviation shall not exceed 10 arc seconds, peak.

3.4.1.1.8 Thermal Vacuum The resolver shall be tested as specified while exposed to a vacuum level of 3.0 psia, and the low and high temperatures specified in 3.4.1.1.3 and 3.4.1.1.4 respectively

3.4.1.2 Endurance During the applicable portions of endurance testing, the following conditions shall be maintained:

a) Low Temperature - 48.9°±2.8°C (120°F±5°F)
b) High Temperature - 82.2°±2.8°C (180°F+5°F)
c) Operating Speed - 0 rpm

3.5 DETAIL CHARACTERISTICS. The resolver shall have the following specific characteristics when tested at the applicable ambient conditions as specified in Specification ND-1002013.

a. Primary	Outer Member
b. Test Voltage	28V ± 2%
c. Test Frequency	800 cps ± 0.5%
d. Impedance

(4) Zss	136 + j 63 ohms, nominal
e. Null Voltage	
(1) Total	28 millivolts, maximum
(2) Fundamental	28 millivolts, maximum
f. Phase Shift	3.3° ± 0.5°
g. Phase Shift Versus Rotation	± 0.50°

h. Transformation Ratio	1.00 ± 1%
i. Angular Error	5 arc minutes, peak, maximum
(1) Angular Interval for Accuracy Measurement	15%
j. Impedance Unbalance, Secondary	100 Z-sec,maximum
k. Input Current, Unloaded	28.9 milliamperes, norminal
m. Input Power, Unloaded	174 milliwatts, nominal
n. DC Resistance	
(1) Primary	58 ohms ± 15%
(2) Secondary	78 ohms ± 15%
p. Air Gap Per Side	0.004 inch, minimum

4. QUALITY ASSURANCE PROVISIONS

4.1 GENERAL. Sampling, inspection and testing shall be in accordance with the requirements of Specification ND-1002013, and as specified herein.

5. PREPARATION FOR DELIVERY

5.1 Preparation for delivery shall be in accordance with the requirements of Specification ND-1002013.

6. NOTES

6.1 The notes specified in Specification ND-1002013 are applicable to this resolver.

3. REQUIREMENTS

3.1 GENERAL. The resolver shall conform to the requirements of specification ND-1002013 with the following exceptions or additions:

a. Accuracy determination shall be made with loads of 1000 ohms ± 10 percent on both secondary windings. The relative accuracy between the two loads shall be ± 0.25 percent.

b. The resolver shall be tested as an RX only, with black excited high, red grounded, and the yellow and blue primary windings commoned and ungrounded.

c. The following paragraphs of Specification ND-1002013 are not applicable.

(1) Phase Shift Variations Due to Voltage.
(2) Angular Error Versus Voltage.
(3) Angular Error Versus Frequency.
(4) Primary Impedance Unbalance.
(5) Temperature Rise.
(6) Friction Torque.
(7) Brush Slip Ring Continuity.

d. Measurement of air gap per side shall be made and shall conform to the value listed in 3.5p.

e. **Alignment of electrical zero:** With the locating dowel pins aligned as specified on drawing 1000030, rated voltage applied as specified in 3.1b, and secondary loads applied as specifed in 3.1a; the electrical output shall be within ± 2 arc minutes of electrical zero.

3.2 DESIGN AND CONSTRUCTION The resolver shall be of the design,construction and physical dimensions shown on drawing 1000030. The manufacture, material, and mechanical and electrical construction of the resolver shall be in accordance with the requirements of Specification ND-1002013.

3.3 FINISHES AND PROTECTIVE TREATMENT The resolver finishes, protective treatment, and moisture, fungus, and corrosion treatments shall be in accordance with the requirements of drawing 1000030 and Specification ND-1002013.

3.4 QUALIFICATION PERFORMANCE CHARACTERISTICS AND CONDITIONS

3.4.1 General. The qualification testing shall conform to the requirements of Specification ND-1002013 with the following exceptions or additions.

3.4.1.1 Environmental.

3.4.1.1.1 Vibration, Operating. With the resolver tested as specified, the angular deviation shall not exceed 40 arc seconds, peak.

3.4.1.1.2 Shock, Operating With the resolver tested as specified, the angular deviation shall not exceed 20 arc seconds, peak.

3.4.1.1.3 Low Temperature, Operating With the resolver subjected to a temperature of 0°C±2.8°C (32°F±5°F) and tested as specified, the angular deviation shall not exceed 30 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 20 mv, rms.

3.4.1.1.4 High Temperature, Operating With the resolver subjected to a temperature of 93.3°±2.8°C (200F±5°F) and tested as specified, the angular deviation shall not exceed 30 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 20 mv,rms.

3.4.1.1.5 52°C Temperature, Operating With resolver subjected to a temperature of 52°±1°C (125.6°F±1.8°F) and tested as specified, the angular deviation shall not exceed 30 arc seconds, peak and the bridge fundamental null voltage variations shall not exceed 20 mv, rms.

3.4.1.1.6 Thermal Shock The resolver shall be tested as specified with the low temperature as indicated in 3.4.1.1.3.

3.4.1.1.7 Humidity, Operating With the resolver tested as specified, the angular deviation shall not exceed 120 arc seconds, max.

3.4.1.1.8 Thermal Vacuum The resolver shall be tested as specified while exposed to a vacuum level of 3.0 psia, and the low and high temperatures specified in 3.4.1.1.3 and 3.4.1.1.4 respectively

3.4.1.2 Endurance During the applicable portions of endurance testing, the following conditions shall be maintained:

a) Low Temperature - 48.9°±2.8°C (120°F±5°F)
b) High Temperature - 82.2°±2.8°C (180°F+5°F)
c) Operating Speed - 0 rpm

3.5 DETAIL CHARACTERISTICS. The resolver shall have the following specific characteristics when tested at the applicable ambient conditions as specified in Specification ND-1002013.

a. Primary	Outer Member
b. Test Voltage	28V ± 2%
c. Test Frequency	800 cps ± 0.5%
d. Impedance	
(1) Zpo	195 ohms + 15% + j946 ohms ± 15%
(2) Zpo	127 + j 53 ohms, nominal
(3) Zso	225 ohms ± 15% + j1028 ohms ± 15%
(4) Zss	136 + j 63 ohms, nominal
e. Null Voltage	
(1) Total	28 millivolts, maximum
(2) Fundamental	28 millivolts, maximum
f. Phase Shift	3.3° ± 0.5°
g. Phase Shift Versus Rotation	± 0.50°

3. REQUIREMENTS

3.1 **GENERAL** The resolver shall conform to the requirements of Specification ND-1002013, with the following exceptions or additions:

a. Accuracy determination shall be made with loads of 10,000 ohms ±10 percent on both secondary windings. The relative accuracy between the two resistors shall be ±1 percent.

b. The following paragraphs of Specification ND-1002013 are not applicable:

(1) Angular Error Versus Voltage
(2) Angular Error Versus Frequency
(3) Impedance Unbalance
(4) Temperature Rise
(5) Friction Torque
(6) Brush Slip Ring Continuity

c. Measurement of air gap per side shall be made and shall conform to the value listed in 3.5 p.

d. While testing the resolver in accordance with the test titled Phase Shift Variation Versus Voltage of Specification ND-1002013, the excitation shall be varied from 0.5 to 2V and the phase shift changes shall be as specified in 3 5 q.

3.2 **DESIGN AND CONSTRUCTION** The resolver shall be of the design, construction, and physical dimensions shown on drawing 1000031. The manufacture, materials, and mechanical and electrical construction of the resolver shall be in accordance with the requirements of Specification ND-1002013.

3.3 **FINISHES AND PROTECTIVE TREATMENT** The resolver finishes, protective treatment, and moisture, fungus, and corrosion treatments shall be in accordance with the requirements of Specification ND-1002013 and drawing 1000031.

3.4 QUALIFICATION PERFORMANCE CHARACTERISTICS AND CONDITIONS

3.4.1 GENERAL The qualification testing shall conform to the requirements of Specification ND-1002013 with the following exceptions or additions.

3.4.1.1 Environmental

3.4.1.1.1 Vibration, Operating. With the resolver tested as specified, the angular deviation shall not exceed 20 arc seconds, peak.

3.4.1.1.2 Shock, Operating. With the resolver tested as specified, the angular deviation shall not exceed 20 arc seconds, peak.

3.4.1.1.3 Low Temperature, Operating. With the resolver subjected to a temperature of 0°C ±2.8°C (32°F ±5°F) and tested as specified, the angular deviation shall not exceed 20 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 2.0 mv, rms.

3.4.1.1.4 High Temperature, Operating With the resolver subjected to a temperature of 93.3° ±2.8°C (200°F ±5°F) and tested as specified, the angular deviation shall not exceed 20 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 2.0 mv, rms.

3.4.1.1.5 52°C Temperature, Operating. With resolver subjected to a temperature of 52° ±1°C (125.6°F ±1.8°F) and tested as specified, the angular deviation shall not exceed 10 arc seconds peak and the bridge fundamental null voltage variations shall not exceed 1.0 mv, rms.

3.4.1.1.6 Thermal Shock The resolver shall be tested as specified with the low temperature as indicated in 3.4.1.1 3.

3.4.1.1.7 Humidity, Operating. With the resolver tested as specified, the angular deviation shall not exceed 20 arc seconds, peak.

3.4.1.1.8 Thermal Vacuum The resolver shall be tested as specified while exposed to a vacuum level of 3.0 psia and the low and high temperature specified in 3.4.1.1.3 and 3.4.1.1.4 respectively.

3.4.1.2 Endurance. During the applicable portions of endurance testing, the following conditions shall be maintained:

a. Low Temperature	48.9° ±2.8°C (120°F ±5°F)
b. High Temperature	82.2° ±2.8°C (180°F ±5°F)
c. Operating Speed	0 rpm

3.5 **DETAIL PERFORMANCE CHARACTERISTICS** The resolver shall have the following specific characteristics when tested at the applicable ambient conditions as specified in Specification ND-1002013.

a. Primary	Outer member
b. Rated Voltage	28V ±1%
c. Test Voltage	1V ±2%
d. Test Frequency	3200 cps ±0.5%
e. Impedance	
(1) Zpo	993 ohms +15% + j 3245 ohms ±15%
(2) Zps	176 + j 258 ohms, nominal
(3) Zso	1063 ohms +15% + j 3470 ohms ±15%
(4) Zss	195 + j 282 ohms, nominal
f. Null Voltages	
(1) Total	1 millivolt rms/1 volt rms input
(2) Fundamental	1 millivolt rms/1 volt rms input
g. Phase Shift	1.5° maximum
h. Phase Shift Versus Rotation	±1.0°
i. Transformation Ratio	1.00 ±3%
j. Angular Error	10 arc minutes peak (maximum)
Angular Intervals for Accuracy Measurement	15°
k. Input Current, Unloaded	0.3 milliampere, nominal
m. Input Power, Unloaded	0.09 milliwatt, nominal
n. DC Resistance	
(1) Primary	80 ohms ±15%
(2) Secondary	103 ohms ±15%
p. Air Gap Per Side	0.005 inch, minimum
q. Phase Shift vs Voltage	±1.0°

4. QUALITY ASSURANCE PROVISIONS

4.1 GENERAL Sampling, inspection and testing shall be in accordance with the requirements of Specification ND-1002013, and as specified herein.

5. PREPARATION FOR DELIVERY

5.1 Preparation for delivery shall be in accordance with the requirements of Specification ND-1002013.

6. NOTES

6.1 The notes specified in Specification ND-1002013 are applicable to this resolver.

TDRR # 00210

This document has been prepared for the purchase of material used in the manufacture of components; the performance requirements and tolerance of the components, the construction specifications; and inspection and test procedures for the components, used on Apollo G&N Equipment.

This document shall be used to check that parts and materials are procured, assembled, and tested to the latest approved and/or authenticated documentation. In case of conflict between this document and drawings and/or specifications the document with the latest date applies.

This document does not supersede any existing publication or instructions.

(Specifications and drawings required by contractors in connection with specific procurement functions should be obtained from the procuring agency as directed by the contracting officer.)

3. REQUIREMENTS

3.1 GENERAL - The resolver shall conform to the requirements of Specification ND-1002013, with the following exceptions or additions:

a. Accuracy determination shall be made with loads of 10,000 ohms ±5% on both secondary windings. The relative accuracy between the two resistors shall be ±1%.

3. REQUIREMENTS

3.1 GENERAL

3.1.1 Prior compliance. The subassemblies comprising the resolver assembly under test shall have met the requirements of their applicable test specifications prior to testing of the resolver assembly.

3.1.2 Qualification Sample. When specified by the procuring activity, representative samples of the resolver assembly shall be manufactured using the methods and procedures proposed for the production lot. These shall be submitted to the NASA inspector for qualification tests at an activity designated in the contract or by the procuring activity.

These qualification tests are conducted to determine whether or not the resolver assemblies are being produced in compliance with the requirements of the contract, specifications, and drawings. Further production of the item by the contractor prior to approval of the procuring activity or the completion of the qualification tests shall be at the contractor's risk. The qualification tests shall be conducted in accordance with the procedures specified in Section 4.

3.1.3 Requalification Samples. When specified by the procuring activity, the contractor shall submit one or more resolver assemblies to a designated testing activity to determine compliance of the sample (s) with the requirements of the contract, specifications, and drawings. The resolver assemblies constituting the sample shall be selected from production lots by the procuring activity.

3.1.4 Electrical. The resolver assembly shall meet the following electrical requirements. All requirements specified herein shall apply to the resolver assemblies covered by this specification.

3.1.4.1 Coincidence of Electrical Zero. When tested in accordance with 4.2.2.3, the ~~pitch yaw~~ resolver shall be within ±3 minutes of electrical zero.

3.1.4.2 Cross Coupling. With the unit tested in accordance with 4.2.2.4, the measured voltage shall not exceed 10 millivolts total.

3.1.5 Qualification The resolver assembly shall meet the following qualification requirements.

3.1.5.1 Vibration, Operating, Condition. The resolver assemblies shall withstand the vibration requirements specified in 4.2.3.3.

3.1.5.1.1 Angular Deviation With the resolver assembly tested as specified, the angular deviation shall not exceed ±0.5 minute.

3.1.5.2 Shock, Operating Condition The resolver assemblies shall withstand the shock requirements specified in 4.2.3.4.

3.1.5.2.1 Angular Deviation With the resolver assembly tested as specified, the angular deviation shall not exceed ±0.5 minutes.

3.1.5.3 Humidity, Operating Condition The resolver assemblies shall exhibit the capabilities of performing as specified herein, with no damage or evidence of rust, blistering, varnish, condensates or corrosion when tested in accordance with the requirements of 4.2.3.5.

3.1.5.3.1 Cross Coupling With the resolver assembly tested as specified, the cross coupling shall be as indicated in 3.1.4.2.

3.1.5.4 Temperature.

3.1.5.4.1 Low. The resolver assembly shall be subjected to the temperature condition specified in 4.2.3.6.1 and upon completion, shall successfully meet the requirements of 3.1.4.

3.1.5.4.2 High. The resolver assembly shall be subjected to the temperature condition speeified in 4.2.3.6.2 and upon completion, shall successfully meet the requirements of 3.1.4.

3.2 DETAIL Additional detail requirements or exceptions applicable to the resolver assemblies are specified on the NASA drawing.. All resolver assemblies procured under this specification shall meet the requirements of the applicable NASA drawing.

3.3 PERFORMANCE AND PRODUCT CHARACTERISTICS. The following requirements are stated to inform the supplier of the goals that were considered in the design. Inclusion of this information shall not be construed by the supplier as authorization to modify the design.

If the design of any part is not completely specified by the contractual documents, the supplier may submit a suggested design document for approval which will support these requirements.

If, in the opinion of the contractor, any design or testing shall impose undue time delay or expense, he shall so state, in detail, in a counterproposal, substantiating all contributing factors when submitting a bid, proposal, or change request in connection with this specification.

Requests for changes or deviations to this specification or to applicable drawings, specifications, publications, materials, or processes specified herein shall be accompanied by written justification.

3.3.1 Design.

3.3.1.1 Reliability Design objectives require maximum reliability of these resolver assemblies during their periods of useful life. Every effort shall be made to design and produce units capable of meeting a maximum failure rate of 5 per 1,000,000 hours.

3.3.1.2 Workmanship The fabrication and finish of the resolver assemblies and parts shall be such as to produce units free from any defect that would affect proper functioning in service. Particular care and attention shall be paid to neatness and thoroughness of soldering, wiring, marking of parts and assemblies, and freedom of parts from burrs and sharp edges.

3.3.2 Parts and Materials. The parts and materials used in fabricating the resolver assemblies shall be in strict accordance with the applicable drawings and specifications referenced herein. Substitute materials shall be selected with such quality as to ensure that the equipment will meet the requirements of this specification and shall be subject to prior approval of the procuring activity.

3.3.2.1 Flammable Materials. Materials which may be ignited or cause an explosion shall not be used for construction applications where sparking or arcing could cause ignition. Materials which may inadvertently support combustion shall not be used. Flammable impregnating, potting, or embedding compounds, when enclosed in fire-resistant containers, shall be acceptable.

3.3.2.2 Toxic Materials. Materials which produce harmful toxic effects during service usage shall not be used. Where a suitable nontoxic material is not available, preventive measures shall be provided, subject to the approval of NASA. Materials which, when ignited, produce toxic substances or vapors shall be avoided whenever practicable.

3.3.2.3 Unstable Materials. Materials which are unstable or become unstable to the extent that they emit or deposit corrosive substances capable of causing corrosion or producing electrical leakage paths within an assembly under possible operating and storage conditions shall not be used during manufacture or recommended for use during maintenance.

3.3.2.4 Corrosion, Moisture, and Fungus-Resistant Materials. Materials shall be selected for noncorrosive and nonhygroscopic characteristics and ability to resist the effects of corrosion, moisture and fungus. Preference shall be given to materials with inherent fungus resistance rather than reliance upon the application of surface fungistatic or fungicidal treatments.

3.3.2.5 Dissimilar Metals. The use of dissimilar metals shall be avoided whenever practicable. Magnesium shall not be used except with the prior approval of the procuring agency or when so called for on the applicable drawings.

3.3.3 Radio Interference Suppression. The suppression of radio noise and interference shall be considered in the design of the resolver assemblies.

3.3.4 Shelf Life. The resolver assembly shall have a shelf life of at least 5 years, without operation, at ambient room temperature, after final acceptance at the vender's plant.

4. QUALITY ASSURANCE PROVISIONS

4.1 **GENERAL** Unless otherwise specified herein, the supplier is responsible for the performance of all inspection requirements prior to submission for NASA inspection and acceptance. Unless otherwise specified, the supplier may utilize his own facilities or any commercial laboratory acceptable to NASA. Inspection records of the examinations and tests shall be kept complete and available to NASA as specified in the contract or order. The supplier shall conform to the quality assurance provisions in Specification MD-1015404, Class 1.

4.2 TESTS

4.2.1 **TEST CONDITIONS** Unless otherwise specified herein, the resolver assemblies shall be subjected to the tests under the following conditions:

a. Temperature	25° ±10°C
b. Relative humidity	Not more than 90%
c. Barometric pressure	28 to 30 inches Hg

4.2.2 **DESCRIPTION OF TESTS** The inspection and testing of the resolver assembly shall be classified as follows:

4.2.2.1 Acceptance Tests. Each resolver assembly being submitted for acceptance under the contract shall be tested by the supplier as stated below. Only those resolver assemblies meeting all of these requirements shall be considered acceptable. Those failing must be rejected. Acceptance test data on each unit accepted must accompany shipment to the purchaser. Acceptance tests shall be witnessed by the cognizant government inspector, a representative of the purchaser, or as the purchaser may direct in the procurement order.

4.2.2.2 Visual and Mechanical Inspection A comprehensive inspection shall be made of the resolver assembly to determine the extent of compliance with the requirements of this specification and drawing 1000033 and shall at least include determination of the following:

a) Size, dimension, tolerances, weight, appearance and markings.

b) Adequacy of materials, parts, and subassemblies; compliance with specific ratings, and conformance to applicable specifications.

c) Finish, coatings, construction, markings, and nameplates as applicable.

d) Wiring, cabling, welding, soldering, color coding, and terminals, as applicable.

e) Workmanship and cleanup

4.2.2.3 Coincidence of Electrical Zero With the locating dowel pins aligned as specified on drawing 1000030, the pitch-yaw resolver shall be within +3 minutes of electrical zero as specified on drawing 1000031. The electrical zero of the pitch-yaw resolver shall be determined with the specified loads and rated test voltage to both resolvers. Each resolver shall be excited with P3 high, P1 low and the P2-P4 windings shorted and ungrounded.

4.2.2.4 Cross Coupling. With the single speed transmitter excited at 28 volts ±2 percent, 800 cps +0.5 percent on a single input winding and the primary windings of the pitch-yaw resolver shorted P2 (Yel) to P4 (Blu), and P1 (Red) to P3 (Blk), the maximum voltage measured at either output phase of the pitch-yaw resolver shall not exceed 10 millivolts total. The single speed resolver shall be excited with black high, red grounded and the yellow and blue primary windings commoned and ungrounded.

4.2.3 Qualification Tests. Qualification tests shall be accomplished by the supplier or other activity pursuant to the recommendations of NASA or the purchaser. Initial qualification tests will be conducted after the award of the contract to determine that the production will meet the requirements of this specification. Failure of the resolver assembly to meet these requirements may result in disqualification of the supplier as determined by NASA or the purchaser. Requalification will be required at the discretion of NASA or the purchaser in the event that (a) the supplier has modified the item; (b) the supplier has instituted a change in the materials used or in his processing and (c) the specification requirements for the item have been amended or revised sufficiently to affect the character of the item.

4.2.3.1 Samples Not less than 5 samples shall be submitted for initial qualification of this item. One or more specimens may be adequate for requalification tests as determined by NASA or the purchaser. Specimens submitted for these tests shall have been produced under conditions representative of the supplier's normal production and shall have passed the acceptance tests listed above.

4.2.3.2 Initial Conditions. During the qualification tests, the locating dowel pins shall be aligned as specified on drawing 1000030. The individual resolvers shall be energized at rated test voltage and frequency and the output windings connected to their respective loads as specified in the individual detail specifications.

4.2.3.3 Vibration, Operating Condition. With the resolver assembly mounted in a suitable test fixture, it shall be subjected to the following vibration requirements: 20g (0 to peak) 5 to 2000 to 5 cps at 1 min/oct, logarithmic sweep once along each of three orthgonal axes, 0.12 inch maximum amplitude. Throughout these tests, both resolvers shall be locked at the position defined in 4.2.3.2 and the pitch-yaw resolver monitored with a resolver bridge and null meter. During and after the test, the angular deviation shall not exceed ±0.5 minute. The angle of the resolver may be reset each time the fixture is remounted to vibrate on another axis.

4.2.3.4 Shock, Operating Condition. With the resolver assembly mounted in a suitable test fixture, it shall be subjected to two shock pulses along each axis in each direction. The shock pulses shall have a

50g, minimum, 6 msec sawtooth wave shape. Throughout these tests, both resolvers shall be locked at the position defined in 4.2.3.2 and the pitch-yaw resolver monitored with a resolver bridge and null meter to indicate any deviations in electrical angle. Angular deviation shall not exceed ± 0.5 minute.

4.2.3.5 Humidity, Operating Condition. The resolver assembly shall be subjected to the humidity conditions of Standard MIL-STD-810, method 507, for five cycles only. During and after this test the resolver assembly shall be checked according to 4.2.2.4 and shall meet the requirements specified therein.

4.2.3.6 Temperature.

4.2.3.6.1 Low. The resolver assembly shall be maintained at a temperature of 0° ± 3°C for 48 hours at nonoperating conditions. Upon completion of the test, the unit shall successfully meet the acceptance test requirements.

4.2.3.6.2 High. The resolver assembly shall be maintained at a temperature of 93° ± 3°C for 48 hours at nonoperating conditions. Upon completion of the test, the unit shall meet the acceptance test requirements.

4.2.3.7 Disposition of Samples. Samples used in test shall not be shipped to the purchaser in compliance with a procurement order.

4.2.3.8 Reliability. The reliability requirements contained in Section 3 of this specification are design objectives. Unless specifically called for in the procurement contract, it shall not be necessary for the supplier to demonstrate his compliance with requirement. The supplier will furnish the purchaser or NASA such data as he may have available for establishing the current reliability of these units. Additional data shall be accumulated to as great a degree as possible from the tests specified herein or any other tests the supplier may conduct which will tend to support or verify attainment of the reliability objectives specified.

5. PREPARATION FOR DELIVERY

5.1 PRESERVATION AND PACKAGING. The resolver assembly shall be preserved and packaged in accordance with Specification MIL-E-17555, level B, as specified in the contract or purchase order.

5.1.1 Unit Protection. The resolver assembly shall be individually afforded unit protection in accordance with method III of Specification MIL-P-116. In addition, equipment packaged for level B protection shall be sealed against water and dust by means of suitable wrapping.

5.1.2 Vibration and Shock, Shipping Condition. Equipment packaging for shipment shall provide adequate protection from all anticipated shipping environments.

5.2 **MARKING.** In addition to any special marking required by the contractor or order, the marking of unit, interior packages, and exterior shipping containers shall be in accordance with level B of Specification MIL-E-17555.

6. NOTES

6.1 Terminology

6.1.1 Environmental Terms. Terms and descriptions applicable to the environmental requirements of this specification are set forth in Standard MIL-STD-202.

6.2 DEFINITIONS

6.2.1 Direction of Rotation The direction of rotation is viewed from the shaft extension end of the resolvers or of the mounting end in the case where no shaft extension exists.

6.2.2 Angular Position The angular position of the resolver is the angular displacement of its secondary about the axis of the secondary from the resolver's zero position measured as an increasing positive angle in the counterclockwise direction.

6.2.3 Resolver or Electrical Zero Resolver or electrical zero is defined as the position of the secondary produced under the following conditions:

That position of the secondary for which windings (P1-P3) and (S2-S4) experience minimum coupling (null) and for which established vector convention is in accordance with figure 1 and the equations specified herein for positive (ccw) rotation.

Resolver Equations

$$E(S1-S3) = KE\ (P1-P3)\cos\theta + KE\ (P2-P4)\sin\theta$$

$$E(S2-S4) = KE\ (P2-P4)\cos\theta - KE\ (P1-P3)\sin\theta$$

6.2.4 Total Null Voltage. The total null voltage is the minimum secondary voltage including harmonics.

NOTICE: When Apollo G&N drawings, specifications, or other data are used for any purpose other than in connection with a definitely related NASA procurement operation, NASA thereby incurs no responsibility nor any obligation whatsoever, and the fact that NASA may have formulated, furnished, or in any way supplied the said drawings, specifications or any other data is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related therein.

NOTES

1. Twisted conductors are to consist of 4 full turns per inch.
2. Conductors with the same number are twisted together.
3. "Y" or "N" in tinned column indicates yes or no
4. Dimensions are in inches & 2 place decimals
5. Interpret drawing in accordance with MIL-D-70327
6. Solder per MIL-STD-440 using item 9
7. Lace cable using item 10
8. Mark characters on connector .10 .14 high, color black per MD 1002019 at location shown
9. Lengths in conductor chart are for reference only.

8. CAUTION: DO NOT REMOVE STATOR FROM ROTOR WITHOUT REPLACING BRUSH RING WITH A MAGNETIC KEEPER RING
9. Ⓐ A VARIATION OF ±.019 IN .032 MOUNTING DIM WILL RESULT IN NOT LESS THAN 75% OF THE BRUSH WIDTH REMAINING ON THE COMMUTATOR UNDER THESE CONDITIONS THE BRUSH WILL NOT INTERFERE WITH THE INSULATION OF THE ARMATURE
10. STATOR TO BE INSPECTED BY USING GAGE (LATER) OF $\frac{6.1256}{6.1253}$ ID & MUST BE $\boxed{◉ .003 \text{ TIR}}$ WITH GAGE SURFACE MOUNTING SCREWS TO BE INSTALLED FOR THIS INSPECTION. ROTOR MUST GO ON ARBOR OF $\frac{4.4993}{4.4995}$ DIA & MUST BE $\boxed{◉ .0015 \text{ TIR}}$ WITH ARBOR SURFACE
11. BREAK CORNERS $\frac{.005}{.015}$ R
12. BRUSH RING TO BE FASTENED TO STATOR USING LONG-LOK SCREWS
13. GOLD PLATE COMMUTATOR PER MIL-G-45204 TYPE II CLASS 3
    ALT: COMMUTATOR MATERIAL SILVER PER MIL-S-13282 OR COIN SILVER.
14. MOTOR TO MEET SPECIFICATION REQUIREMENTS WHEN THE STATOR AND ROTOR AXES ARE ECCENTRIC BY .002 AND OUT OF PARALLEL BY .5 MILLIRADIANS.
15. BRUSH RING TO BE 2 SEGMENTS
16. + DC AT TERMINAL NO. 1 WILL RESULT IN A CCW ROTATION OF THE INNER RING WHEN VIEWED FROM THE COMMUTATOR SIDE.

(Copies of specifications and drawings required by contractors in connection with specific procurement functions should be obtained from the procuring agency or as directed by the contracting officer.)

3. REQUIREMENTS

3.1 General The motor shall conform to the requirements of this specification. Details not specified herein shall be as specified in Specification ND-1002012.

3.2 Design and Construction. The motor shall be of the design, construction, and physical dimensions shown on the National Aeronautics and Space Administration (NASA) drawing 1000075. The manufacture, materials, and mechanical and electrical construction of the motor shall be in accordance with the requirements of Specification ND-1002012.

3.3 Initial Qualification. Motors furnished under this specification shall be representative of a product which has been tested and has passed the qualification tests specified in 4.1.

3.4 Acceptance Inspection. Motors furnished under this specification shall be inspected by the contractor as specified in 4.3. Acceptance shall be based on 100 percent compliance on a unit basis.

3.5 Specific Characteristic Requirements The motor shall have the following specific characteristic requirements at 50° ± 5°C (122° ± 9° F) unless otherwise specified:

Sensitivity	
Average torque over one complete revolution	250 ounce-inches per ampere ± 10% at 0.28 ampere ± 1%
Linearity Deviation Less Than	± 5%
Peak Test Current	0.28 ampere ± 1%
Low Test Current	0.1 ampere ± 1%
*Self Inductance	0.03 henry, nominal
Air Gap Per Side	0.005 inch minimum
Power	
At 0.28 ampere at 25° C	6.5 watts, nominal
Ripple Torque	
At 0.28 ampere	10 ounce-inches peak-to-peak
Frictional Torque	5 ounce-inches, nominal 8 ounce-inches, maximum
DC Resistance at 25°C	100 ohms maximum at any position

*Reference values (to be finalized after fabrication)

4. QUALITY ASSURANCE PROVISIONS

4.1 Initial Qualification Inspection Motors for initial qualification shall be selected at random from units that have met the requirements of 4.3. If any motor of a test sample fails to withstand all environmental and life tests specified herein, initial qualification shall be withheld until proof of compliance is given to the qualifying agency. Delivery of production motors before receipt of initial qualification shall be at the discretion of the procuring activity.

4.1.1 Sample Size The sample size shall be three motors.

4.1.2 Vibration, Operating Condition The motor shall be capable of withstanding the vibration test of Standard MIL-STD-202, method 204, test condition B, except that a double amplitude of 0.3 inch shall be maintained from 5 to 36 cps. The unit shall then be subjected to 20 g's vibration from 36 to 2,000 cps and back to 36 cps. A double amplitude of 0.3 inch shall then be maintained from 36 to 5 cps. Sweep time and duration shall consist of one sweep at a logarithmic rate of 2 minutes per octave, approximately equal to 35 minutes on each of 3 axis for a total vibrational test time of 105 minutes. During the test the motor armature shall rotate at least at 1 rpm while delivering maximum rated continuous torque and the direction of rotation shall be reversed once each minute. There shall be no discontinuity of input current greater than 30 percent during the test. At the conclusion of the test the motors shall meet the requirements of 4.1.7.

4.1.3 Shock The motor shall be able to withstand six impact shocks, one in each direction along each of three orthogonal axes. Each shock pulse shall be a half sinusoid with a maximum amplitude of 50±5 g's, and a time duration of 11±1 milliseconds when measured with a filter having a bandwidth of 5 to 100 cps. The maximum g shall be reached in approximately 5.5 milliseconds. At the conclusion of the test the motors shall meet the requirements of 4.1.7.

4.1.4 Temperature Cycling Three temperature cycles shall be performed, each cycle consisting of 4 hours at -65°C, 4 hours at +85°C, and 10 minutes maximum between temperature extremes. After the test and when the motor has stabilized at room ambient conditions, the motor shall meet the requirements of 4.1.7.

4.1.5 Oxygen Compatibility The motor shall be tested for 4 days in a pure oxygen atmosphere at 3.5 psia. During the test the motor armature shall rotate at least at 1 rpm while delivering one-half maximum rated continuous torque and the direction of rotation shall be reversed once each minute. During and at the conclusion of the test the motor shall meet the requirements of 4.1.7.

4.1.6 Accelerated Life The motor shall be tested for 250 hours of accelerated life at 90°C at 160 rpm minimum with one-half of maximum rated current applied. Sensitivity and starting torque shall be determined after each successive 50 hours of test time. At the conclusion of 250 hours of test the motor shall meet the requirements of 4.1.7.

4.1.7 Failure Definitions

4.1.7.1 Insulation Resistance Insulation resistance shall not be less than 100 megohms.

4.1.7.2 Brush Pressure Brush pressure shall not have more than a 20 gram spread for all measurements of any individual brush. The pressure of any brush shall not decrease by more than 15 grams from the original value.

4.1.7.3 Sensitivity Sensitivity shall not decrease by more than 15 percent of the original value.

4.1.7.4 Friction Friction shall not increase more than 25 percent from the original value or exceed the normal tolerance, whichever is greater.

4.1.7.5 Brush Wear Rate The brush wear rate at 160 rpm shall not be greater than 0.002 inch per 50 hours period of operation as specified in 4.1.6 and 4.2.

4.1.7.6 Other Tolerances for Failure. All other tolerances shall be within the norm when measured at room ambient temperature.

4.2 Extended Life Inspection Life testing shall be continued under the conditions specified in 4.1.6, except the motors shall be tested for an additional 1750 hours, or until destruction, whichever occurs first. ~~Sensitivity and starting torque shall be determined after each 250 hours and the tests of 4.1.7. shall be performed upon test completion.~~ In addition, one of each ten motors from production shall be life tested to conditions of 4.1.6 and this paragraph for 2000 hours, or until destruction.

4.3 Acceptance Inspection Acceptance inspection, as specified herein, shall be performed on 100 percent of the items submitted for acceptance. Acceptance inspection shall consist of the following:

(a) Visual Inspection
(b) Air-Gap Per Side (Mechanical Inspection)
(c) Dielectric Strength
(d) Insulation Resistance
(e) Speed
(f) Brush Pressure
(g) Sensitivity
(h) Linearity Determination
(i) Ripple Torque
(j) Friction
(k) DC Resistance

4.4 Final Qualfication Inspection Final qualification shall be granted after compliance with the requirements of 3.5.

5. PREPARATION FOR DELIVERY

5.1 Preparation for delivery shall be in accordance with the requirements of Specification MD-1002012.

6. NOTES

6.1 The notes specified in Specification MD-1002012, and as specified herein, are applicable to this motor.

NOTICE — WHEN GOVERNMENT DRAWINGS, SPECIFICATIONS, OR OTHER DATA ARE USED FOR ANY PURPOSE OTHER THAN IN CONNECTION WITH A DEFINITELY RELATED GOVERNMENT PROCUREMENT OPERATION, THE UNITED STATES GOVERNMENT THEREBY INCURS NO RESPONSIBILITY NOR ANY OBLIGATION WHATSOEVER; AND THE FACT THAT THE GOVERNMENT MAY HAVE FORMULATED, FURNISHED, OR IN ANY WAY SUPPLIED THE SAID DRAWINGS, SPECIFICATIONS OR OTHER DATA IS NOT TO BE REGARDED BY IMPLICATION OR OTHERWISE AS IN ANY MANNER LICENSING THE HOLDER OR ANY OTHER PERSON OR CORPORATION, OR CONVEYING ANY RIGHTS OR PERMISSION TO MANUFACTURE, USE, OR SELL ANY PATENTED INVENTION THAT MAY IN ANY WAY BE RELATED THERETO.

REQUIREMENTS:

1. GENERAL
   - A. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED BY MIL-D-70327.
   - B. SUPPLIER SHALL CONFORM TO QUALITY ASSURANCE PROVISIONS IN ND 1015404, CLASS 1.
   - C. UNITS SHALL BE CAPABLE OF MEETING REQUIREMENTS OF PS 1000097.
2. INSPECTION AND ACCEPTANCE
   - A. INSPECTION: AS SPECIFIED IN PS 1000097.
   - B. MARKING: IDENTIFY PART WITH NASA DRAWING NUMBER, REVISION LETTER, SERIAL NUMBER, MANUFACTURER'S NAME AND/OR SYMBOL, ARROW AND TERMINAL IDENTIFICATION PER ND 1002019 AT THE INDICATED POSITIONS. MFR PART NUMBER MAY ALSO BE USED.
3. DESIGN REQUIREMENTS
   - A. SOLDER LEADS TO TERMINALS PER MIL-STD-440.
   - B. WIRE SHALL BE PER MIL-W-16878, TYPE E-26, 12 INCHES LONG MINIMUM.
   - C. ROTATION IN THE DIRECTION OF THE ARROW FROM AN INITIAL STATIONARY CONDITION SHOULD RESULT FIRST IN A VOLTAGE AT THE TERMINAL MARKED (+) BEING POSITIVE WITH RESPECT TO THE VOLTAGE AT TERMINAL MARKED(-).
   - D. INSULATION, TUBING SIZE #16, 3/8 LONG PER MIL-I-22129 EXCEPT WALL THICKNESS TO BE 0.012 ± .003 INCHES.
   - E. INTERNAL CONSTRUCTION SHALL BE SUCH THAT LEAD REPLACEMENT CAN BE ACCOMPLISHED WITH A 24 WATT SOLDERING IRON, 60-40 TIN LEAD SOLDER, AND NORMAL SOLDERING PRACTICE WITHOUT INTERNAL DAMAGE.

NOTES:

1-INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327.

2-LEAD WIRES TO BE PER MIL-W-16878-C, TYPE E-26. LENGTH 12 INCHES MIN.

3-POLARITY OF OUTPUT VOLTAGE AS INDICATED BY TERMINAL MARKINGS, SHOULD OCCUR WITH CONSTANT ANGULAR ACCELERATION OF CASE IN DIRECTION OF ARROW

4-IDENTIFY USING DRAWING NO., REVISION LETTER, SERIAL NO., AND MFR SYMBOL AT THE INDICATED POSITION PER MIL-STD-130.

5-ASSEMBLY TO MEET THE REQUIREMENTS OF PS 1000097

PROCUREMENT SPECIFICATION

ACCELEROMETER, ANGULAR DIFFERENTIATING

1. SCOPE

1.1 This specification establishes the requirements for the procurement of an angular differentiating accelerometer hereinafter called ADA.

2. APPLICABLE DOCUMENTS

2.1 The following documents of the issue in effect on the date of invitation for bids form a part of this specification to the extent specified herein.

NOTES:

1. GENERAL:
   - A. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED BY MIL-D-70327
   - B. SUPPLIER SHALL CONFORM TO QUALITY ASSURANCE PROVISIONS SPECIFIED IN ND1015404 CLASS 3
   - C. IDENTIFY USING DRAWING NO., REVISION LETTER, APPLICABLE DASH NO., REVISION LETTER, AND MANUFACTURERS SYMBOL PER MIL-STD-130. MANUFACTURERS NAME AND PART NO. MAY ALSO BE USED.

2. INSPECTION & ACCEPTANCE:
   - A. MATERIAL: TERMINAL; BRASS, QQ-B-626 COMP 22 FORM ROD, TEMPER HALF HARD
     INSULATION; TEFLON, VIRGIN WHITE, MIL-P-19468
   - B. FINISH: TERMINAL; SOLDER ELECTROPLATE, .0003 TO .0005 THK, 40-70 % TIN CONTENT PER MIL-T-10727 TYPE I
   - C. DIMENSIONS: AS SHOWN ON DRAWING AND TABLE INCLUDING THE FOLLOWING;
     1. INSIDE CORNERS .010 R MAX
     2. BREAK SHARP EDGES .005/.015

3. DESIGN REQUIREMENTS:
   - A. ELECTRICAL:
     1. VOLTAGE RATING; 750 VOLTS (RMS) AT SEA LEVEL
     2. CURRENT RATING; 5.5 AMPS
     3. TEMPERATURE RANGE; -65°C TO 200°C
   - B. MECHANICAL:
     Ⓑ 1. PULL TEST; (TERMINAL INSTALLED IN PLATE)
       - a. TERMINAL TO TEFLON : 10 LBS MIN
       - b. TEFLON TO PLATE : 10 LBS MIN PER APPLICATION DATA CHART.

   - B. SUPPLIER SHALL CONFORM TO QUALITY ASSURANCE PROVISIONS SPECIFIED IN ND1015404 CLASS 2
   - C. UNITS SHALL BE CAPABLE OF MEETING ALL QUALIFICATION REQUIREMENTS SPECIFIED IN ND1002052 UNLESS MODIFIED OR AMMENDED BY SECTION 3 (DESIGN REQUIREMENTS) OF THIS DRAWING
   - D. IDENTIFY USING DRAWING NUMBER, REVISION LETTER & MANUFACTURERS SYMBOL OR NAME PER ND 1002019.
   - E. UNITS SHALL BE CAPABLE OF MEETING APPLICABLE REQUIREMENTS OF MIL-C-8384 UNLESS MODIFIED BY ND1002052 OR ELSEWHERE IN THIS DRAWING
   - F. PACKAGING TO BE IN ACCORDANCE WITH ND1002215 CLASS I
2. INSPECTION & ACCEPTANCE
   - A. MECHANICAL REQUIREMENTS:
     - 1) MATERIAL: CONTACTS; PHOSPHOR BRONZE, GOLD PLATED PER MIL-G-45204, TYPE II, CLASS 2 OVER COPPER FLASH
       SCREWS; STAINLESS STEEL, PASSIVATED
       BODY; GLASS FILLED DIALLYLPHTHALATE PER MIL-M-19833, TYPE GDI-30 (GREEN)
     - 2) DIMENSIONS: AS SHOWN ON DRAWING
     - 3) CONNECTOR SHALL MATE WITH CONNECTOR, NASA PART NO.1000120
   - B. ELECTRICAL REQUIREMENTS:
     - 1) INSULATION RESISTANCE: 1000 MEGOHMS MIN AT 1000 VDC
     - 2) DIELECTRIC STRENGTH: 1600 VRMS AT SEA LEVEL
3. DESIGN REQUIREMENTS:
   - A. SERVICE RATING; 530 VRMS AT SEA LEVEL 140 VRMS AT 70,000 FT
   - B. DIELECTRIC STRENGTH; 425 VRMS AT 70,000 FT
   - C. CONTACT RATINGS; 3 AMPS
   - D.1) CONTACT RESISTANCE; 20 MV AT 3 AMPS
   - 2) CONTACT RESISTANCE; 25 MICROVOLTS MAX AT 250 MICROAMPS DC AFTER 500 INSERTIONS AND WITHDRAWALS
   - E. INSERTION AND WITHDRAWAL FORCE; 2 TO 11 OZ/PIN WITH MATING CONNECTOR
   - F. CONTACT CENTER TO CENTER; 3/32 ± .002
   - G. MATING TORQUE; UNIT SHALL WITHSTAND A MATING TORQUE OF 2 1/2 IN-LBS MAXIMUM WITHOUT DEGRADATION OF PERFORMANCE
   - H LOCKWASHER: CRES PER QQ-S-763, COMP 302,303 OR 304
   - I NUT: CRES, PER QQ-S-763, COMP 302,303,OR 304

NOTES

NOTES:

1. TWISTED CONDUCTORS ARE TO CONSIST OF 4 FULL TURNS PER INCH MINIMUM
2. SUFFIX LETTERS ON CONDUCTOR NUMBERS INDICATE THE FOLLOWING:
   - A INDICATES SHIELD GROUND ON "FROM" END
   - B INDICATES SHIELD GROUND ON "TO" END
   - C INDICATES WHT/ORN
   - D INDICATES WHT/BLK/BRN
   - E INDICATES GRAY
   - F INDICATES WHT/BLK/RED
   - G INDICATES GREEN
   - H INDICATES WHT/BLU
   - J INDICATES WHT/RED
   - K INDICATES BLACK
   - L INDICATES BLUE
   - M INDICATES WHT/YEL
   - N INDICATES BROWN
   - O INDICATES ORANGE
   - R INDICATES RED
   - S INDICATES WHT/BLK
   - T INDICATES WHT/BRN
   - U INDICATES WHT/GY
   - V INDICATES VIOLET
   - W INDICATES WHITE
   - X INDICATES WHT/VIO
   - Y INDICATES YELLOW
   - P INDICATES WHT/GRN
3. "Y" OR "N" IN TINNED COLUMN INDICATES YES OR NO
4. DIMENSIONS ARE IN INCHES AND TWO PLACE DECIMALS
5. SOLDER PER MIL-STD-440 USING ITEM 31
6. LACE CABLE USING ITEM 32
7. SPARE LEADS ON CONNECTORS J21, J28, J29, AND J30 TO BE CUT TO 10 INCHES AND LACED INTO HARNESS
8. CONDUCTORS WITH THE SAME NUMBER ARE TWISTED TOGETHER
9. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
10. MARK CHARACTERS .10 .14 HIGH COLOR BLACK PER ND1002019 AT LOCATIONS SHOWN
11. LENGTHS SPECIFIED FOR TWISTED CONDUCTORS ARE FOR AFTER TWISTING.
12. LENGTHS IN CONDUCTOR CHART ARE FOR REFERENCE ONLY

NOTES

NOTES:

1. CONDUCTORS TO BE TWISTED PER THE WIRE TWISTING CHART.
2. SUFFIX LETTERS ON CONDUCTOR NUMBERS INDICATE THE FOLLOWING:

A INDICATES SHIELD GROUND ON "FROM" END
B INDICATES SHIELD GROUND ON "TO" END
C INDICATES WHT/ORN
D INDICATES WHT/BLK/BRN
E INDICATES GRAY
F INDICATES WHT/BLK/RED
G INDICATES GREEN
H INDICATES WHT/BLU
J INDICATES WHT/RED
K INDICATES BLACK
L INDICATES BLUE
M INDICATES WHT/YEL
N INDICATES BROWN
O INDICATES ORANGE
R INDICATES RED
S INDICATES WHT/BLK
T INDICATES WHT/BRN
U INDICATES WHT/GY
V INDICATES VIOLET
W INDICATES WHITE
X INDICATES WHT/VIO
Y INDICATES YELLOW
Z INDICATES WHT/GRN

3. "Y" OR "N" IN TWISTED COLUMN INDICATES YES OR NO
4. DIMENSIONS ARE IN INCHES AND TWO PLACE DECIMALS
5. SOLDER PER MIL-STD-440 USING ITEM 31
6. LACE CABLE USING ITEM 32
7. SPARE LEADS ON CONNECTORS J21, J28, J29, AND J30 TO BE CUT TO 10 INCHES AND LACED INTO HARNESS
8. CONDUCTORS WITH THE SAME NUMBER ARE TWISTED TOGETHER
9. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327
10. MARK CHARACTERS .10 .14 HIGH COLOR BLACK PER MD1002019 AT LOCATIONS SHOWN
11. LENGTHS SPECIFIED FOR TWISTED CONDUCTORS ARE FOR AFTER TWISTING.
12. LENGTHS IN CONDUCTOR CHART ARE FOR REFERENCE ONLY

3. REQUIREMENTS

3.1 GENERAL The resolver shall conform to the requirements of Specification MD-1002013 with the following exceptions or additions.

a. The resolver shall be tested as an RX only with black excited high, red grounded, and the yellow and blue primary windings commoned and ungrounded.

b. The following paragraphs of Specification MD-1002013 are not applicable.

1. Phase Shift Variation Due to Voltage
2. Angular Error Versus Voltage
3. Angular Error Versus Frequency
4. Primary Impedance Unbalance
5. Temperature Rise
6. Friction Torque
7. Brush Slip Ring continuity
8. Phase Shift Versus Rotation

c. Measurement of air gap per side shall be made and shall conform to that value listed in 3.5m.

d. Alignment of slots A and B at electrical zero in accordance with drawings 1000161 and 1000162 shall be as specified in 3.5p.

3.2 DESIGN AND CONSTRUCTION The resolver shall be of the design, construction, and physical dimensions shown on drawing 1000160. The manufacture, materials, and mechanical and electrical construction of the resolver shall be in accordance with the requirements of Specification MD-1002013.

3.3 FINISHES AND PROTECTIVE TREATMENT The resolver finishes, protective treatment, and moisture, fungus, and corrosion treatments shall be in accordance with the requirements of Specification MD-1002013 and drawing 1000160.

3.4 QUALIFICATION PERFORMANCE CHARACTERISTICS AND CONDITIONS

3.4.1 **GENERAL** The qualification testing shall conform to the requirements of Specification ND-1002013 with the following exceptions or additions.

3.4.1.1 Environmental

3.4.1.1.1 Vibration, Operating With the resolver tested as specified, the angular deviation shall not exceed 5 arc seconds, peak.

3.4.1.1.2 Shock, Operating With the resolver tested as specified, the angular deviation shall not exceed 5 arc seconds, peak.

3.4.1.1.3 Low Temperature, Operating With the resolver subjected to a temperature of -17.8°C ±2.8°C (0°±5°F) and tested as specified, the angular deviation shall not exceed 5 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 10 mv, rms.

3.4.1.1.4 High Temperature, Operating With the resolver subjected to a temperature of 93.3° ±2.8°C (200°F ±5°F) and tested as specified, the angular deviation shall not exceed 5 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 10 mv, rms.

3.4.1.1.5 52°C Temperature, Operating With resolver subjected to a temperature of 52° ±1°C (125.6°F ±1.8°F) and tested as specified, the angular deviation shall not exceed 4 arc seconds, peak and the bridge fundamental null voltage variations shall not exceed 5 mv, rms.

3.4.1.1.6 Thermal Shock The resolver shall be tested as specified with the low temperature as indicated in 3.4.1.1.3.

3.4.1.1.7 Humidity, Operating With the resolver tested as specified, the angular deviation shall not exceed 5 arc seconds, peak.

3.4.1.1.8 Thermal Vacuum The resolver shall be tested as specified while exposed to a vacuum level of 1×10^{-4} mm, Hg and the low and high temperatures specified in 3.4.1.1.3 and 3.4.1.1.4 respectively.

3.4.1.2 Endurance During the applicable portions of endurance testing, the following conditions shall be maintained:

a) **Low Temperature**	21.1° ±2.8°C (70° ±5°F)
b) **High Temperature**	82.2° ±2.8°C (180° ±5°F)
c) **Operating Speed**	0 rpm

3.5 **DETAIL PERFORMANCE CHARACTERISTICS** The resolver shall have the following specific characteristics when tested at the applicable ambient conditions as specified in Specification MD-1002013.

a.	Primary	Outer member
b.	Test Voltage	28V ±2%
c.	Test Frequency	800 cps ±0.5%
d.	Impedance	
	(1) Zpo	40 ohms +15% + j 360 ohms ±10%
	(2) Zps	75 + j 245 ohms, nominal
	(3) Zso	395 ohms +15% + j 1050 ohms ±10%
	(4) Zss	420 + j 690 ohms, nominal
e.	Null Voltages	
	(1) Total	20 millivolts, maximum
	(2) Fundamental	15 millivolts, maximum
f.	Phase Shift	$5.5^\circ \pm 1.5^\circ$
g.	Transformation Ratio	1.00 ±3%
h.	Angular Error	20 arc seconds peak, of one speed mechanical shaft maximum; 10 arc seconds rms, of one speed mechanical shaft maximum.
	Angular Interval for Accuracy Measurement	16° electrical
i.	Impedance Unbalance, Secondary	2 Z-sec maximum of one speed mechanical shaft
	Angle for Impedance Unbalance Measurement	45° and 315° of second electrical cycle
j.	Input Current, Unloaded	80 milliamperes, nominal
k.	Input Power, Unloaded	0.25 watt, nominal
m.	DC Resistance	
	(1) Primary	35.0 ohms +15%
	(2) Secondary	380 ohms ±15%
n.	Air Gap Per Side	0.0045 inch minimum
p.	Alignment, Slots A and B	$90^\circ \pm 0^\circ$ 1 minute

4. QUALITY ASSURANCE PROVISIONS

4.1 GENERAL Sampling, inspection, and testing shall be in accordance with the requirements of Specification ND-1002013, and as specified herein.

5. PREPARATION FOR DELIVERY

5.1 Preparation for delivery shall be in accordance with the requirements of Specification ND-1002013.

6. NOTES

6.1 The notes specified in Specification ND-1002013 are applicable to this resolver.

3.4 QUALIFICATION PERFORMANCE CHARACTERISTICS AND CONDITIONS

3.4.1 GENERAL. The qualification testing shall conform to the requirements of Specification ND-1002013 with the following exceptions or additions.

3.4.1.1 Environmental

3.4.1.1.1 Vibration, Operating. With the resolver tested as specified, the angular deviation shall not exceed 7.5 arc seconds, peak.

3.4.1.1.2 Shock, Operating. With the resolver tested as specified, the angular deviation shall not exceed 7.5 arc seconds, peak.

3.4.1.1.3 Low Temperature, Operating. With the resolver subjected to a temperature of -17.8°C ±2.8°C (0° ±5°F) and tested as specified, the angular deviation shall not exceed 7.5 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 10 mv, rms.

3.4.1.1.4 High Temperature, Operating. With the resolver subjected to a temperature of 93.3° ±2.8° (200°F ±5°F) and tested as specified, the angular deviation shall not exceed 7.5 arc seconds, peak and the bridge fundamental null voltage variation shall not exceed 10 mv, rms.

3.4.1.1.5 52°C Temperature, Operating. With resolver subjected to a temperature of 52° ±1°C (125.6°F ±1.8°F) and tested as specified, the angular deviation shall not exceed 7.5 arc seconds, peak and the bridge fundamental null voltage variations shall not exceed 10 mv rms.

3.4.1.1.6 Thermal Shock. The resolver shall be tested as specified with the low temperature as indicated in 3.4.1.1.3.

3.4.1.1.7 Humidity, Operating. With the resolver tested as specified, the angular deviation shall not exceed 40 arc seconds, peak.

3.4.1.1.8 Thermal Vacuum. The resolver shall be tested as specified while exposed to a vacuum level of 1 x 10^{-4} mm, Hg and the low and high temperature specified in 3.4.1.1.3 and 3.4.1.1.4 respectively.

3.4.1.2 Endurance. During the applicable portions of endurance testing, the following conditions shall be maintained:

a) Low Temperature	21.1° ±2.8°C (70° ±5°F)
b) High Temperature	82.2° ±2.8°C (180° ±5°F)

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH MIL-D-70327.
2. RESOLVERS SHALL BE AT ELECTRICAL ZERO WITHIN ±2° WHEN LEADS ARE POSITIONED AS SHOWN.
3. LEADS TO BE 12" MINIMUM LENGTH PER MIL-W-16878 TYPE E-28.
4. PART MUST CONFORM TO SPEC PS-1000160.
5. LEADS TO EXIT THRU A .156 DIA HOLE LOCATED ON A 1" R.
6. LEADS TO EXIT THRU A .156 DIA HOLE LOCATED ON A 1.450" R.
7. A POSITIVE RESOLVER ANGLE "A" RESULTS WHEN THE INNER RESOLVER WINDING IS ROTATED CLOCKWISE FROM ELECTRICAL ZERO AS VIEWED IN THE DIRECTION INDICATED BY THE ORIENTATION ARROW IN SECTIONAL VIEW. POLARITY IS SUCH THAT THE FOLLOWING CONDITIONS ARE SATISFIED:

$$E_{S3} = K\left[E_{P3}\ \mathrm{COS}\ 16A - E_{P4}\ \mathrm{SIN}\ 16A\right]$$

$$E_{S4} = K\left[E_{P3}\ \mathrm{SIN}\ 16A + E_{P4}\ \mathrm{COS}\ 16A\right]$$

WHERE "K" IS THE TRANSFORMATION RATIO. AT ELECTRICAL ZERO (A=0) $E_{S3} = KE_{P3}$ AND $E_{S4} = KE_{P4}$.

DESCRIPTION AND REQUIREMENTS PUBLICATION
FOR
PROCUREMENT OF
SIXTEEN SPEED RESOLVER TRANSMITTER
TYPE 37RU N8

1. SCOPE

1.1 SCOPE. This specification establishes the requirements for the procurement of the Sixteen Speed Resolver Transmitter, Type 37RU N8, hereinafter called resolver.

2. APPLICABLE DOCUMENTS

2.1 The following documents of the issue in effect on the date of invitation for bids form a part of this specification to the extent specified herein.

(1) VOLTAGE RATING: 125 VOLTS MAXIMUM.

(2) TEST SPECIFICATIONS:

(a) CHARACTERISTIC A - CARRY 100 PERCENT OF RATED LOAD, AND WILL OPEN WITHIN 10 SECONDS AT 200 PERCENT OF RATED LOAD. SEE TABLE I.

(b) CHARACTERISTIC B - CARRY 100 PERCENT OF RATED LOAD, AND WILL OPEN WITHIN 10 SECONDS AT 150 PERCENT OF RATED LOAD. SEE TABLE I.

B. CONSTRUCTION AND MECHANICAL:

(1) ENCLOSURE: GLASS BODY, METAL END CAPS, HERMETICALLY SEALED.

(2) LEAD MATERIAL SHALL BE IRON-NICKEL-COBALT ALLOY, GOLD PLATED PER NASA DOCUMENT PS 1015402. A CERTIFICATE OF COMPLIANCE WITH THIS REQUIREMENT SHALL ACCOMPANY EACH SHIPMENT.

(3) LEAD BEND TEST: EACH LEAD SHALL BE CAPABLE OF WITHSTANDING THE FOLLOWING LEAD BEND TEST. THE COMPONENT BODY SHALL BE HELD IN A VERTICAL POSITION WITH A TWO POUND WEIGHT SUSPENDED FROM THE LEAD UNDER TEST. 2 CYCLES OF BENDS SHALL BE ACCOMPLISHED, A CYCLE CONSISTING OF MOVING THE BODY OF THE UNIT, WHILE IN THE SAME PLANE, THROUGH 90 DEGREES IN ONE DIRECTION, THEN 180 DEGREES IN THE OPPOSITE DIRECTION AND BACK 90 DEGREES TO THE ORIGINAL POSITION. NO MECHANICAL DAMAGE OR LACK OF PERFORMANCE SHALL BE EVIDENCED AFTER THE TEST.

(4) LEAD PULL TEST: EACH LEAD SHALL BE CAPABLE OF WITHSTANDING AN AXIAL PULL OF 4 POUNDS MINIMUM.

C. PACKAGE MARKING: UNIT PACKAGES SHALL BE LEGIBLY MARKED WITH THE MANUFACTURER'S IDENTIFICATION, PART NUMBER AND CURRENT RATING.

D. ENVIRONMENTAL: UNITS SHALL BE CAPABLE OF WITHSTANDING THE ENVIRONMENTAL TESTS SPECIFIED IN NASA DOCUMENT ND 1000200.

E. SUPPLIER SHALL CONFORM TO THE QUALITY ASSURANCE PROVISIONS SPECIFIED IN NASA DOCUMENT ND 1015404, CLASS II.

2. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED IN MIL-D-70327.

REQUIREMENTS:

1. GENERAL:

A. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED IN MIL-D-70327.

B. SUPPLIER SHALL CONFORM TO QUALITY ASSURANCE PROVISIONS SPECIFIED IN NASA DOCUMENT 1015404, CLASS 2.

C. PACKAGE MARKING: UNIT PACKAGES SHALL BE LEGIBLY MARKED WITH THE NASA DRAWING NUMBER, DASH NUMBER, REVISION LETTER, MANUFACTURER'S IDENTIFICATION, PART NUMBER AND CURRENT RATING.

D. UNITS SHALL BE CAPABLE OF MEETING ALL QUALIFICATION REQUIREMENTS SPECIFIED IN PARAGRAPH 4.

2. INSPECTION AND ACCEPTANCE:

A. LEAD MATERIAL: TINNED COPPER

B. CURRENT RATING: PER TABLE I.

(1) CHARACTERISTIC A: CARRY 100 PERCENT OF RATED LOAD, AND WILL OPEN WITHIN 10 SECONDS AT 200 PER CENT OF RATED LOAD.

(2) CHARACTERISTIC B: CARRY 100 PER CENT OF RATED LOAD, AND WILL OPEN WITHIN 10 SECONDS AT 150 PER CENT OF RATED LOAD.

3. DESIGN:

A. ENCLOSURE: GLASS BODY, METAL END CAPS, HERMETICALLY SEALED.

B. VOLTAGE RATING: 125 VOLTS, MAXIMUM

C. LEAD BEND TEST: EACH LEAD SHALL BE CAPABLE OF WITHSTANDING THE FOLLOWING LEAD BEND TEST. THE COMPONENT BODY SHALL BE HELD IN A VERTICAL POSITION WITH A TWO POUND WEIGHT SUSPENDED FROM THE LEAD UNDER TEST. 2 CYCLES OF BENDS SHALL BE ACCOMPLISHED. A CYCLE CONSISTING OF MOVING THE BODY OF THE UNIT, WHILE IN THE SAME PLANE, THROUGH 90 DEGREES IN ONE DIRECTION, THEN 180 DEGREES IN THE OPPOSITE DIRECTION AND BACK 90 DEGREES TO THE ORIGINAL POSITION. D. LEAD PULL TEST: EACH LEAD SHALL BE CAPABLE OF WITHSTANDING AN AXIAL PULL OF 4 POUNDS, MINIMUM.

E. ENVIRONMENTAL REQUIREMENTS: AS SPECIFIED IN PARAGRAPH 4.

4. QUALIFICATION: THIRTY SAMPLES, INCLUDING THE HIGHEST AND LOWEST CURRENT RATINGS SHALL BE SUBJECTED TO THE FOLLOWING TESTS. BEFORE AND AFTER EACH TEST THE FUSES SHALL BE VISUALLY INSPECTED AND SUBJECTED TO RATED CURRENT FOR 2 MINUTES.

A. TEMPERATURE CYCLING: PER MIL-STD-202, TEST CONDITION A (-55°C. TO +85°C.)

B. VIBRATION: UNIT SHALL BE LEAD MOUNTED AND SUBJECTED TO 20 G'S (LIMITED TO 0.12 DA), 5 CPS TO 2000 CPS TO 5 CPS AT 2 MINUTES/OCTIVE. LOGARITHMETIC SWEEP ONCE ALONG EACH OF TWO AXES (RADIAL AND AXIAL).

C. SHOCK: PER MIL-STD-810, METHOD 516, PROCEDURE V, EXCEPT 3 SHOCKS IN EACH DIRECTION ALONG EACH OF TWO AXES (AXIAL AND RADIAL), AT 50G'S.

D. LEAD BEND AND PULL: PER PARAGRAPH 3.C AND 3.D.

E. ELECTRICAL TEST: FOLLOWING QUALIFICATION TESTS, ALL UNITS SHALL BE SUBJECTED TO TESTS SPECIFIED IN TABLE I.

PROCURE ONLY FROM APPROVED SOURCES LISTED ON ND 1002034 FOR THIS DRAWING.

NOTES
1. INTERPRET DRAWING IN ACCORDANCE WITH STANDARDS PRESCRIBED BY MIL-D-70327
2. SUPPLIER SHALL CONFORM TO QUALITY ASSURANCE PROVISIONS SPECIFIED IN NASA SPEC ND1015404 CLASS 2
3. PACKING & SHIPPING: THE BLOWER SHALL BE PRESERVED AND PACKAGED IN ACCORDANCE WITH MIL-P-17555 LEVEL B
4. IDENTIFY USING DRAWING NO., REVISION LETTER, SERIAL NO. & MANUFACTURERS SYMBOL OR NAME PER MIL-STD-130. MANUFACTURERS PART NO. MAY ALSO BE USED
5. BLOWER SHALL MEET THE FOLLOWING OPERATING REQUIREMENTS WITH 800 CPS SINGLE PHASE SINE WAVE (SWITCHED WAVE FORM) VOLTAGE APPLIED AND 1.5 MFD CAPACITOR CONNECTED AS SHOWN IN WIRING DIAGRAM
   A. ELECTRICAL:
   - *1. WITH VOLTAGE INCREASED GRADUALLY FROM ZERO, THE MOTOR SHALL START AT 5.0 V RMS MAXIMUM
   - *2. WITH VOLTAGE DECREASED GRADUALLY FROM 24 VOLTS RMS THE MOTOR SHALL HAVE A MAXIMUM SPEED OF 150 RPM AT 3.0V RMS WHEN CHECKED DURING MANUFACTURER'S FINAL INSPECTION AND USER'S RECEIVING INSPECTION. MAXIMUM SPEED AT 3.0 VOLTS RMS OVER 2000 HRS OF OPERATING LIFE SHALL BE 2000 RPM.
   - *3. POWER CONSUMPTION: 10 WATTS MAX
   - 4. VOLTAGE RANGE: 0 VOLTS TO 26 VOLTS RMS

   B. MECHANICAL:
   - 1. AT 24 V RMS INPUT, ONE ATMOSPHERE PRESSURE AND AT ROOM TEMP.
     - *a. ROTOR SPEED: 17,000 RPM MIN IN DIRECTION SHOWN (FREE AIR DELIVERY)
     - Ⓒ **b. FREE AIR DELIVERY: 23 CFM MIN
     - **c. STATIC PRESSURE AT NO DELIVERY: 1.6 INCHES OF WATER MIN
   - 2. AIRFLOW: IN DIRECTION SHOWN

6. BLOWER SHALL MEET THE FOLLOWING STATIC (NON-OPERATING) REQUIREMENTS
   A. ELECTRICAL:
   - *1. DC RESISTANCE AT 20° TO 25° CENTIGRADE: T1 TO T4: 20.5Ω ± 10%
     T1 TO T5: 22.5Ω ± 10%
   - *2. INSULATION RESISTANCE: 100 MEGOHMS MIN AT 500 V DC APPLIED FOR ONE MINUTE MAX

   B. MECHANICAL:
   - *1. LEADS SHALL CONFORM TO MIL-W-16878 TYPE E-30 AND SHALL BE THE COLOR SPECIFIED IN THE WIRING DIAGRAM
   - **2. MATERIAL: HOUSING AND IMPELLER SHALL BE ALUMINUM.
     HOUSING: ANODIZED PER MIL-A-8625 DYED BLACK OR FINISHED WITH BLACK ENAMEL PER MIL-E-5557 TYPE IV
     IMPELLER: FINISHED WITH BLACK ENAMEL PER MIL-E-5557 TYPE IV
7. DESIGN REQUIREMENT:
   - A. BLOWER SHALL BE CAPABLE OF MEETING THE REQUIREMENTS SPECIFIED IN NASA SPEC ND 1002058 PARAGRAPHS 4.2.6 THRU 4.6.10 EXCEPT BLOWER MUST OPERATE. AT FULL SPEED CONDITION AT 3.0 PSIA MAX PRESSURE AND 100°F MIN AMBIENT TEMP FOR 96 HOURS WITHOUT FAILURE
   - Ⓒ B. THE BLOWER SHALL BE CAPABLE OF MEETING THE REQUIREMENTS OF THIS DRAWING FOR 2,000 HOURS OF OPERATION AT 24V RMS INPUT AND 135° ± 5°F AMBIENT TEMPERATURE EXCEPT AS NOTED IN PARAGRAPH 5.A.2.
   - Ⓒ C. THE BLOWER SHALL HAVE A SHELF LIFE OF AT LEAST 5 YEARS, WITHOUT OPERATION, AT AMBIENT ROOM TEMPERATURE, AFTER FINAL ACCEPTANCE AT THE VENDORS PLANT, IF STORED IN EXCESS OF ONE YEAR PROVISIONS SHOULD BE MADE FOR BEARING REPLACEMENT
   - D. DESIGN OBJECTIVES REQUIRE MAXIMUM RELIABILITY OF THE BLOWER DURING ITS PERIOD OF USEFUL LIFE. EVERY EFFORT SHALL BE MADE TO DESIGN AND PRODUCER BLOWERS CAPABLE OF MEETING A MAXIMUM FAILURE RATE OF 3 PER 1,000,000 HOURS

Ⓒ * ACCEPTANCE TESTS (100%)

SHOCK	50 G FOR 6 MILLISECONDS
Ⓐ AMBIENT TEMPERATURE LIMITS	-65°F TO +175°F
COMPENSATED RANGE	0°F TO +150°F
PRESSURE RANGE	0-25 PSIA
MAX PRESSURE OVERLOAD	200% OF RATED RANGE
RESONANT FREQUENCY	8000 CYCLES PER SECOND
ACCELERATION RESPONSE	
(a) 0 TO 2.5 KC	0.05% FULL SCALE/G
(b) STATIC	0.04% FULL SCALE/G

Ⓐ 3. ACCEPTANCE REQUIREMENTS:

RESOLUTION	CONTINOUS
COMBINED NON-LINEARITY & HYSTERESIS	LESS THAN ±1% FULL SCALE OUTPUT DEVIATION FROM THE BEST FIT STRAIGHT LINE
